Phase-transfer catalyst - Wikipedia Phase-transfer catalysis is a special form of heterogeneous catalysis. Ionic reactants are often soluble in an aqueous phase but insoluble in an organic phase in the absence of the phase-transfer catalyst. Phase Transfer Catalysis Home Page PTC Organics is the only company dedicated exclusively to developing high-performance low-cost processes for the manufacture of organic chemicals using Phase-Transfer Catalysis to improve customer process performance and profit.

phase transfer catalysis - an overview | ScienceDirect Topics Phase-transfer catalysis is a useful procedure for a variety of interesting metal-catalyzed reactions. 54,55 However, only one example of this approach has been reported for the synthesis of diynes by the sp<sup>2</sup>-sp carbon coupling reaction. The Basic Principle of Phase-Transfer Catalysis, Some ... phrase phase transfer catalysis, and although some would tend to disagree with calling the PT cycle a catalytic process in the true sense of the word catalysis, the terminology has been well established and stays, especially since only catalytic amounts of the phase-transfer agents are required for effective phase-transfer action. PTC Organics - Official Site Phase Transfer Catalysis reduces the cost of manufacture of organic chemicals. PTC Organics increases customer profits by providing PTC technology to enhance the productivity, quality, safety and environmental performance of manufacturing processes for the production of organic chemicals and polymers. Phase Transfer Catalysis Industrial Overview Phase-transfer catalysis offers a variety of conceptual and practical advantages when performing carbonylations as described in reference. 15 Among these advantages unique to PTC are the ability of quats to transfer the anionic forms of metal carbonyls to the organic phase, in which CO is about 10 times more soluble than in water, which further.
